

MAZDASPEED 3 REAR DIFFUSER INSTALLATION INSTRUCTIONS

This fiberglass part comes with a gelcoat finish and should be painted prior to installation.
Installation is easiest when removed from the car.

1. Remove the rear bumper fascia.
2. Get rid of the foam around the steel bumper bar.
3. Cut the bumper all around the black area, leaving about ½ inch of material, and leaving the two sockets for the reflectors (photo 1).
4. Bolt the new diffuser into the reflector sockets and the two holes underneath (photo 2).
5. Replace the bumper with the new diffuser.
